Experience

Full Stack Mobile Developer

Calliber | 2024 – Present

- Led development of **3 production mobile apps (iOS & Android)** using React Native (Expo)
- Built a **platform connecting customers and service providers** (marketplace + lead system)
- Developed **scalable backend (Node.js, MySQL)** and REST APIs with WebSockets
- Implemented **authentication systems** (JWT, Firebase Auth, OAuth, SMS verification)
- Integrated payments using GreenInvoice with post-payment flows
- Built **admin panel with role-based access** for managing users and system data
- Implemented **real-time notifications** using Firebase and OneSignal
- Developed key features: search & filtering, ratings, lead management, media uploads
- Managed infrastructure on **Google Cloud** and deployed apps to App Store & Google Play
- Handled **1K–5K daily API requests** and ongoing production maintenance

Technical Skills

- **Languages:** JavaScript (Node.js), C#
- **Mobile:** React Native (Expo), Flutter
- **Backend:** REST APIs, WebSockets, Authentication
- **Cloud:** Google Cloud, Firebase
- **Database:** MySQL
- **Tools:** GitHub, Docker, Postman,

Education

Projects

Built a full marketplace mobile app for buying and selling 3D-printed products, including seller stores, product uploads, real-time chat, search, filtering, notifications, and deep links.
The app was developed with a clean Flutter architecture, Firebase integration, responsive UI, and full support for both iOS and Android.
I focused on performance, security, user experience, and solving complex product-level problems from end to end.
This project reflects my ability to take an idea and turn it into a real, production-ready mobile product.
